\$399.99

FailSafe Broadband Cellular N Router allows you to share your Internet Stick!

.....
A robust 802.11N router with 3G failover capability for small office/home office, temporary and remote enterprise environments for continuous, always-available connectivity. With its' built-in failover capability, it automatically switches from wired to wireless networking when the primary ISP service is disrupted. Once service is restored, the unit will automatically failback to the primary ISP without interruption to users. Your business is always connected.

Powered by WiPipe™ technology, the router includes many features found in expensive, enterprise-class routers, such as load balancing and SNMP, at a fraction of the cost with minimal set up and maintenance. No software to load means no IT interaction is necessary and you'll be up and running in minutes.

Secure and Reliable

The high-performance router comes standard with top security features like, multiple and concurrent VPN pass-through sessions, encryption modes including WEP, WPA/WPA2/Enterprise and a firewall preventing unauthorized use of your connection.
